

Information Event

Master of Arts in "Science-Technology-Society"

universität
wien

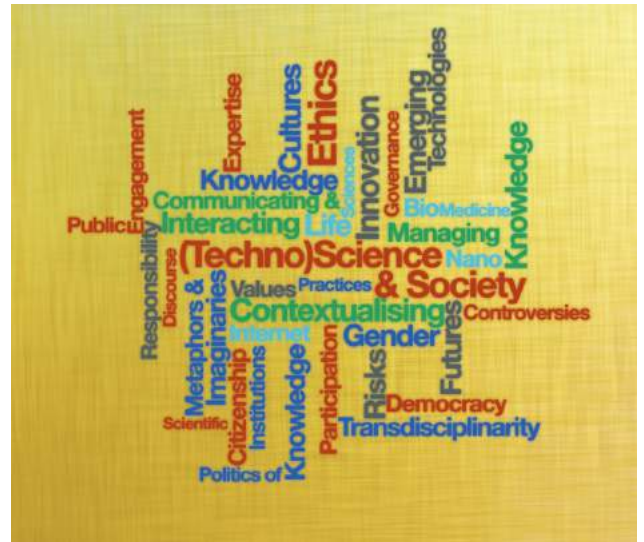

Institut für Wissenschafts- und Technikforschung
Department of Science and Technology Studies

WHEN:
6 December 2016, 18:30

WHERE:
STS Seminar Room, NIG,
Universitätsstraße 7/II/6th floor,
1010 Vienna

Scientific and technological developments play a crucial role in how we live in modern societies, and in how we imagine societal futures. At the same time, social values, political agendas or economic logics influence how scientific research is conducted and technological artifacts are designed. Science, technology and society are hence inextricably interrelated. This constitutes the object of research of the field of Science and Technology Studies (STS).

Are you interested in doing a master's degree on the relations of science, technology and society? You are warmly invited to take part in the information event on "Science-Technology-Society".

After a **presentation of the program director**, there will be opportunities for **informal interaction with current students** of the master programme.
